

HEDGER TRIMMER

Item #62-5437

Blade Length: 8" Total Length: 24" Weight: 2 lb.

Cuts up to
3/8" D

Great for hedge trimming and pruning, this Hedger/Trimmer cuts branches up to 5/8" in diameter. It is manufactured from the finest high-carbon Japanese steel, and its extremely sharp blades feature a unique design and cutting lengths for pruning and shaping shrubs and hedges. The blades are pressed, sharpened, and double-tempered for long-lasting sharpness. This pressed steel technology produces thin, durable blades that remain sharp for clean, easy, and fast cuts. The hedger also features lightweight aluminum extruded oval handles for added strength and round handles with soft elastomer grips for comfort.

SHARK CORPORATION

www.sharkcorp.com

Super Sharp – All YardShark™ blades are forged in the ancient tradition of Japanese Bonsai art from top grade, high-carbon Japanese steel, then cut to shape and hardened. Sharpened blades are then double-tempered for superb sharpness that lasts three times longer than blades fashioned by traditional drop forge methods. Each shearing curvature is hand-adjusted for the cleanest cut, and a special hard coating protects blades from rust while assuring smooth friction-free operation and minimal sap buildup. The blade effectively cuts along its entire length with minimum loss of power at the tip.

Super Light, Super Comfortable – YardShark™ handles are crafted with pressure-extruded aluminum, making them extremely lightweight. Their oval shape enhances strength and resists bending. Each handle is then fitted with ergonomically-designed grips for exceptional comfort, greater leverage, and great balance. A special rubber-like elastomer provides a non-slip, shock-absorbing, heat-resistant surface that makes YardShark™ products a pleasure to use.

Cutting Edges are Precision Engineered

- 1: Hand-ground, double-tempered blade produces the sharpest cutting edge.
- 2: Beveling of the blade helps prevent chipping and maintains a sharp edge.
- 3: Interior surfaces are ground slightly concave to reduce friction and sap buildup.
- 4: Curvature of edge helps prevent wood slippage.

Shock-Absorbing

Special bumpers absorb shock and vibration, reducing fatigue even during extended use.

Adjustable Blade Tension

The cap over the self-locking hinge nut prevents water from entering but is easily removed when adjustment is required by inserting a knife under the cap.

Strong—Yet Lightweight

YardShark™ handles are made from strong, yet lightweight, aluminum. Their extruded oval shape creates the most advantageous combination of lightness and strength. Handles are fully extended to the end of the grip.

Special Features for Greater Cutting Power

Blades overlap to create greater cutting power all the way to the blade tips.

Easy Extension

Telescopic hedger handle features a simple flip-locking mechanism for easy one-handed operation. Flip open, micro-adjust to desired length, and flip closed to lock and secure into place.

Special Unique Design (Pat. pend.)

- 1: Specially designed wide "U" opening enables insertion of larger branches deep into the critical leverage point for greater cutting power with minimal effort.
- 2: The tip of the counter blade is ground for ease of bypass.

Soft & Comfortable

Industrial strength handles feature rubber-like elastomer and double-injection non-slip grips for long-lasting comfort.

Double the Power

Compound hinge mechanism provides twice the cutting power for the Anvil Lopper.
